Section 1: Benefits of Integrating Strategies to Support the Social and Emotional Wellness of Children, Families, and Providers

Introduction

The social and emotional well-being of young children is an important goal for many federal, state, territory, tribal and local programs. “Healthy social and emotional development refers to a child’s capacity to experience, manage, and express a full range of positive and negative emotions; develop close, satisfying relationships with others; and actively explore environments and learn” (ZERO TO THREE, 2009, para. 5). The foundation of social and emotional wellness is established in nurturing and responsive relationships. These relationships include a child’s family and the early childhood professionals providing care in early childhood settings. The early childhood system of care thrives when there is an integration of social and emotional wellness strategies to support all three—children, families, and providers.

Supporting Young Children

A child’s social and emotional well-being affects his or her overall physical and mental health. Addressing the needs of the “whole child” focuses on teaching supports and nurtures all areas of children’s development and learning, which is a powerful strategy as young children grow, develop, and transition to kindergarten. Young children experience their world as an environment of relationships, and these relationships affect virtually all aspects of their development. “As young children develop, their early emotional experiences literally become embedded in the architecture of their brains” (National Scientific Council on the Developing Child, 2004, p.1). Therefore, identifying strategies to support a child’s social and emotional well-being is just as important as his or her physical health. This includes supporting children in establishing meaningful relationships with others, including relationships with adults and peers; assisting children in managing their emotions; and helping them respond appropriately to others’ emotions. Just as the ability to regulate one’s own emotions and manage successful interactions with other people is key for later academic performance, mental health, and social relationships (National Scientific Council on the Developing Child, 2004), behavioral problems at a young age are strongly linked to behavioral challenges in adolescence (e.g., drug use, violence, and dropping out of school).

Strategies that might be integrated into a state, territory, or tribal system to support young children include the following:
1. Implementation of a social and emotional learning program, such as Circle of Security or Incredible Years

2. Adoption of positive behavior interventions and support frameworks, such as the Pyramid Model for Promoting the Social and Emotional Competence in Infants and Young Children

3. Embedding of social and emotional indicators for quality rating improvement systems

4. Inclusion of social and emotional development in early learning guidelines

**Supporting Families**

Effective strategies to support the social and emotional wellness of children include engaging children’s families. The stability and quality of a child’s relationship with caring adults lay the foundation for his or her developmental outcomes. Social and emotional wellness strategies that include families allow adults to learn how to support their child in building social and emotional skills and teach adults themselves how to practice and model such skills (McClelland et al., 2017). In addition, early emotional and social development must be incorporated into services to support parents who are struggling to manage routine behavioral difficulties in their young children, as well as those who are trying to figure out whether, when, and how to deal with more serious social or emotional problems (Brooks-Gunn et al., 2000).

Strategies that might be integrated into a state, territory, or tribal system to support families include the following:

1. Inclusion of a social and emotional protective factors framework, such as Strengthening Families

2. Adoption of a statewide initiative to support a statewide network of resources for parents and families, such as Help Me Grow

**Supporting Early Childhood Professionals**

Finally, providing supports for early childhood professionals in early learning settings affects the degree to which a child’s social and emotional wellness is fostered. The science of development supports that “greater attention must be focused on the social and emotional development of children in both pre-professional training programs and continuing professional education” (National Scientific Council on the Developing Child, 2004, p. 4). Providing training on social and emotional wellness reduces the incidence of expulsion of young children from early childhood programs and increases the confidence of early childhood professionals to
support children with challenging behaviors. Strategies such as the Pyramid Approach and infant and early childhood mental health consultation reinforce the facilitation of a shared approach with caregivers to support social and emotional well-being in early childhood.

Strategies that might be integrated into a state, territory, or tribal system to support early learning and school-age programs include the following:

1. Integration of responsive caregiving or relationship-based care training and professional development
2. Incorporation of social and emotional professional development, intentionally supporting skills children need to manage their emotions and recognize the emotions of others (e.g., emotional literacy, emotional regulation, empathy, and perspective-taking), which would also include social skills, such as social understanding, development of self-confidence, and positive social interactions with peers and adults
3. Increased access to infant and early childhood mental health consultants to support early childhood professionals
4. Increased access to coaches who can support responsive, relationship-based care
5. Professional development on the use of social and emotional learning screeners
6. Use of child care health consultants to support developmental surveillance or screening in early childhood settings
7. Support of trauma-responsive training for early childhood professionals
8. Creation and adoption of a social and emotional toolkit for use by providers
9. Identification and alignment of social and emotional measurement strategies across initiatives and organizations using the Common Indicators of Social-Emotional Well-Being in Early Childhood, which is being piloted by Project Linking Actions for Unmet Needs in Children’s Health and Child Trends
10. Ensure core knowledge and competencies for the early childhood workforce include a focus on the understanding of best practices to support social and emotional development
11. Implementation of social and emotional professional development to support social and emotional learning skills in school-age children (including emotional literacy, emotional regulation, insight building, empathy, perspective-taking, and problem-solving) and the embedding of supporting skills, such as communication skills, social understanding, development of self-confidence, assertiveness, and positive social interactions with peers and adults

12. Support of trauma-responsive training for youth care professionals (see the National Center on Afterschool and Summer Enrichment’s Adverse Childhood Experiences Resources)

13. Creation and adoption of a social and emotional learning toolkit for use by providers, like the Afterschool Alliance’s Social Emotional Learning toolkit

Benefits of Implementing an Integrated and Comprehensive System of Social and Emotional Supports

Research indicates that children that have a strong social and emotional foundation have increased benefits in the following areas:

- Better physical health—improving social and emotional skills promotes healthier lifestyles, reduces risky behavior such as substance use, and has been linked with a lower body mass index (Bavarian et al., 2016; Moffitt et al., 2011)
- Improved academic achievement and increased school readiness
- Increased ability to follow classroom rules and routines
- Enhanced attention span and ability to persist at challenging tasks, which predicts greater enjoyment of school
- Reduced problem behaviors
- Elevated rates of high school graduation and productive employment (Jones et al., 2015)

Benefits for families include the following:

- Enhanced confidence in their parenting skills
- Increased understanding of social and emotional wellness
- Improved ability to manage children’s difficult behaviors
Benefits for early learning programs include the following:

- Increased family engagement
- Increased staff “competence and confidence in the support of children”
- “Reduced turnover in the program”
- “Reductions in child challenging behavior”
- “Increases in children’s social skills”
- “Increased satisfaction of program staff and families”
- “Changes in classroom and program climate”

(National Center for Pyramid Model Innovations, n.d., para. 3)
Section 2: Implementation Considerations—Theory of Change and Logic Models

Promising practices show that an effective implementation strategy for launching a new initiative contains four essential elements: an articulated theory of change model (addressing what you are trying to achieve) to guide services, initiative delivery strategies, staff-provider relationships, and staff training and support. Before embarking on the implementation of a social and emotional wellness initiative, stakeholders should clearly define and articulate the scope and focus of the work. A theory of change and a logic model are two tools that support the development of a comprehensive plan to articulate the “what,” “why,” and “how” of a social and emotional wellness initiative.

What Is a Theory of Change?

A theory of change is an essential driver in effectively designing, operating, and evaluating any new initiative. It describes “the set of assumptions that explain both the mini-steps that lead to the long-term goal of interest and the connections between program activities and outcomes that occur at each step of the way” (Weiss, 1995). A well-articulated theory of change allows Child Care and Development Fund (CCDF) Administrators to identify goals and variables that need to be measured in order to support anticipated outcomes. “From a practical point of view, going through the exercise of developing, refining, and promoting a theory of change enables program leadership and staff to articulate the “what,” “why,” and “how” of interventions that improve social and emotional wellness (Center of Excellence for Infant and Early Childhood Mental Health Consultation, n.d., para. 1).

What Does a Theory of Change Model Look Like?

“A basic TOC [theory of change model] explains how a group of early and intermediate accomplishments sets the stage for producing long-range results. A more complete TOC articulates the assumptions about the process through which change will occur and specifies the ways in which all of the required early and intermediate outcomes related to achieving the desired long-term change will be brought about and documented as they occur” (de la Mata, 2018, paras. 7–8).

A theory of change tool can be found in the Innovation for Social Change’s A Tool to Develop Your Theory of Change. The Center of Excellence for Infant and Early Childhood Mental Health Consultation describes an example of a theory of change developed by Dr. Deborah Perry in Theory of Change Examples from GUCCHD and Arizona’s Smart Support Program.
What Is a Logic Model?

“A logic model is a graphic depiction (road map) that presents the shared relationships among the resources, activities, outputs, outcomes, and impact for your program. It depicts the relationship between your program’s activities and its intended effects” (Centers for Disease Control and Prevention, n.d., para. 1). Logic models are particularly important to use in establishing your goals, which are uniquely linked to your intended target population.

Like a road map, a logic model shows the intended route and the steps to be taken to reach a specific endpoint. A detailed model indicates how each activity will lead to desired changes. A logic model also expresses the thinking behind your initiative plan and helps make stakeholders’ expectations explicit. Appendix A covers guidance on developing a logic model and a logic model template.

How Do These Differ?

A theory of change differs from a logic model in that the primary purpose of a theory of change is to explain the cause and effect between specific elements of an intervention and a particular outcome. While a logic model graphically displays the link between inputs, outputs, and outcomes, it does not explain the necessary conditions under which that outcome is expected to result. Logic models also provide important contextual information, such as who stakeholders for the program are, the rationale for selecting this program for this population, and other elements. The theory of change gives the “big picture” and summarizes work at a strategic level, while a logic model illustrates the implementation-level understanding of the change process.

Developing a Logic Model

Ideally, a logic model is developed during your design of the initiative. However, network partners can create a logic model at any time to help bring clarity to the work, create consensus or a better understanding of the network, or help focus an evaluation. A clearly articulated logic model will help identify the scope and goals of your initiative. A logic model will help stakeholders do the following:

- Articulate their understanding of the current community or state needs related to social and emotional wellness and determine the changes they hope to make through a targeted initiative implementation.
Identify who needs to be involved in the initiative planning and implementation and whom the initiative is targeting.

Identify activities planned to contribute toward the initiative.

Determine the resources needed to launch and sustain the initiative.

Clarify assumptions and examine the external factors that could influence the results.
Section 3: Initiative Delivery Strategies

Ideally, decisions about service delivery strategies are grounded in evidence that suggests that the strategy will help produce positive results and is informed by valid and reliable data. In addition, launching a child, family, and provider social and emotional wellness strategy should consider the reality of using specific strategies (for example, professional development, coaching, or consultation services) based on the following:

- The identified interests, strengths, and needs of children, families, and providers
- The community and early care and education system context, including other resources and services available
- Ways to avoid duplication and maximize partnering with existing resources across all sectors (e.g., health, early learning, family support, home visiting, and community institutions)
- An analysis of the equity of services available and barriers to accessing them, such as opportunities for training and professional development or availability of training in a first language
- Opportunities for training and coordination across resources for other early learning programs (e.g., schools, centers, home visiting, and family child care)
- Available personnel and funding
- The time it takes to achieve the intermediate outcomes
- The capacity to simultaneously offer multiple services

Social and Emotional Wellness Strategies

There are many strategies to help increase the social and emotional wellness of children, families, and providers. In addition to considering the research on the value of social and emotional health, states, territories, or tribes should consider the most common needs of the audiences being served and the activities that will best address those needs, including the following:

- **Coaching and consultation:** These activities could occur through program visits, virtual consultation or coaching, phone calls, emails, learning communities, webinars, or other locally designed strategies.
- **Training and professional development:** This may include access to types of learning opportunities that best suit the unique professional learning needs and workplace conditions (e.g., distance learning, professional learning offered in multiple languages, topical training at community sites or onsite, connecting providers to credit-bearing professional learning opportunities, and offering training during nontraditional hours).
Social and Emotional Wellness

- **Connections to peers, professional support, and the community**: This may include hosting meetings to increase provider opportunities for peer and professional connections, using meetings and communication to share information on community resources, and gathering input on needs to strengthen future supports.

- **Training for trainers**: This may include developing a cadre of trainers that can provide professional development on social and emotional learning, relationship-based care, or early childhood mental health.

- **Infant and early childhood mental health consultation**: “Infant and early childhood mental health consultation is a prevention-based approach that pairs a mental health consultant with adults who work with infants and young children in the different settings where they learn and grow, such as child care, preschool, home visiting, early intervention and their home.” (Center for Infant and Early Childhood Mental Health Consultation, n.d., para. 1).

- **Pyramid Model**: The Pyramid Model is a framework of evidence-based practices for promoting young children’s healthy social and emotional development. The National Center for Pyramid Model Innovations provides states with the technical assistance and training to establish the systems and policies needed to implement, sustain, and scale up the implementation of the Pyramid Model by early education and care programs.

- **Positive Behavioral Interventions and Supports (PBIS)**: PBIS is an evidence-based multi-tiered framework “to improve and integrate all of the data, systems, and practices affecting student outcomes every day” (PBIS, n.d., para. 3).

- **Quality rating and improvement systems**: States often address social and emotional development in their quality standards.
Section 4: A Stage-Based Framework for Implementing a Social and Emotional Wellness Strategy for Children, Families, and Providers

The stage-based framework for implementing an initiative involves four stages: exploration, installation, initial implementation, and full implementation. In addition, implementation research has included the identification of a set of three core implementation components: using teams to lead implementation efforts, using data and feedback loops to inform decisionmaking and continuous improvement, and developing a sustainable implementation infrastructure. These core implementation components are threaded throughout each implementation stage (Metz et al., 2015). Appendix C illustrates how the three core implementation elements are mapped across each of the implementation stages.

Core Implementation Components

Using Teams to Lead Implementation Efforts

Implementation teams are groups of individuals who have the task of intentionally monitoring and supporting various aspects of implementation. Teams may include key personnel such as initiative coordinators, providers, and key stakeholders (e.g., parents, program developers, funders, mental health consultants, child care resource and referral staff, training and technical assistance organizations, community members). Members of the team should mirror the race, language, and culture of the audiences to be served. Ideally, implementation teams are established at every level of the initiative. For example, a statewide implementation model may require implementation teams at the state, regional, and local levels to support a large-scale initiative.

Implementation teams should have adequate knowledge and skills in several specific areas in order to be effective team members. Teams should contain one or more members who are knowledgeable about social and emotional wellness, understand the implementation infrastructure necessary to support such an initiative, and are committed to using data and feedback loops for continuous improvement.

Using Data and Feedback Loops to Inform Decisionmaking and Continuous Improvement

Successful social and emotional wellness initiative implementation relies on continuous quality improvement (CQI) through the regular assessment and feedback of data across planning, implementation, and outcomes. This process can be as simple as soliciting informal verbal feedback about what worked well and what could be improved in the future during planning calls or team meetings. This element is also critical for shoring up feedback loops and
connecting current child care policy (e.g., Child Care and Development Block Grant [CCDBG]) Act of 2014, child care licensing rules and regulations) to practice. Continuous improvement cycles should demonstrate the Plan, Do, Study, Act cycle on an organizational scale (see the National Implementation Research Network’s “Framework 5: Improvement Cycles” web page, which discusses the Plan, Do, Study, Act phases).

**Developing a Sustainable Implementation Infrastructure**

General infrastructure capacity refers to skills or characteristics (at the individual level) and the overall functioning (at the organizational and community levels) associated with the ability to implement or improve a social and emotional wellness initiative. For example, when developing general infrastructure capacity to undertake the launch of a new social and emotional wellness initiative, organizations would want to focus on hiring individuals with adequate knowledge and background in mental health and social and emotional learning. At the organizational level, building the infrastructure capacity would involve developing a clear mission, strong leadership, effective organizational structure, good working climate, adequate technology, and data-informed decisionmaking processes. At the community level, building general infrastructure capacity would focus on bringing additional resources and building cross-sector community linkages, including links with health, family support, and early learning sectors.

**Stages of Implementation**

**Stage I: Exploration**

The first stage of initiative implementation is exploration. Team activities in this stage include assessing child, family, provider, and community needs; considering possibilities for meeting those needs; judging the feasibility of different implementation models and activities to meet identified needs; and developing an action plan and necessary resources for its implementation. To determine initiative feasibility, you may choose to engage in some of the following activities:

- Complete a needs, strengths, and opportunities assessment.
- Engage in discussions with your target audiences (consider both focus groups and one-on-one conversations) to gather information on their needs and develop an understanding of the barriers they face to accessing existing resources.
- Explore key considerations for implementation of activities, use of data, and feedback loops.
- Conduct a scan of available social and emotional learning or mental health resources to support implementation.

Engaging in these activities will increase the likelihood your efforts are informed by timely and accurate data collection and information on readiness for implementation.

**Stage II. Installation**
During the installation stage, new services are not yet being delivered; however, the necessary individual and organizational competencies and supporting infrastructure are being established so that the initiatives can be successfully implemented.

During this time, network teams actively build their capacity to launch the innovations selected during the exploration stage. Implementation teams gather data during this phase and make any adjustments to the approach or the implementation supports (e.g., training, coaching, leadership strategies) or infrastructure (e.g., data collection processes) to facilitate success.

**Exploring Funding Resources**

As part of the implementation process, available funding sources will need to be considered. The logic model and corresponding action plan that implementation teams develop provide clarity on required financial resources for start-up and implementation. Implementation teams can access other funding options to supplement CCDF financial supports, such as the following:

- Foundations: Foundation Directory Online is a nonprofit service organization that offers an online listing of grants in the United States.

**Stage III. Initial Implementation**

During the initial implementation stage, service delivery begins and is offered to target audiences. The implementation team may consider launching the initiative to providers before families or vice versa. The key activities of the initial implementation stage involve strategies to promote continuous improvement. The following six questions help to promote continuous improvement during initial implementation:

1. What does the initiative look like now?
2. Are we satisfied with how the service delivery model looks?
3. How will we know if we have been successful with implementation?
4. What can we do to maintain the success?
5. What can we do to make the initiative more efficient and durable?
6. What possibilities exist for expanding the reach of the services?

**Stage IV. Full Network Implementation**
**Evaluation of Network Services**

Evaluation, the fourth stage, is a critical element in a program’s implementation and should be used to validate the efficacy and continued implementation of the initiative. Evaluation informs the continuous quality improvement of the services. Process and outcome evaluation will look at impacts, benefits, and changes to the target audiences (as a result of the initiative efforts) during their participation, after their participation, or both. As addressed in the logic model, an evaluation will examine these types of changes in the short, intermediate, and long term.

**Designing the Evaluation**

There are four main steps to developing an evaluation plan:

1. Identify the objectives and goals.
2. Develop the evaluation questions.
3. Develop the evaluation methods.
4. Set up a timeline for evaluation activities.

The first step in designing an evaluation is to clarify the initiative’s objectives and goals. What are the main things to be accomplished, and what has been established to accomplish them? Clarifying these will help identify which major program components should be evaluated.

The second step is to develop evaluation questions and evaluation methods. Consider the following key questions when designing an initiative evaluation:

- What purpose will the evaluation serve? What do you want to know and decide as a result of the evaluation?
- Who are the audiences for the information from the evaluation (e.g., CCDF Lead Agency, funders, providers)?
- What kinds of data are needed to inform the evaluation?
- Who will provide the evaluation data?
- How will the data be collected?
- When is the information needed?
- What resources are available to collect the information?

Supervision and support for network staff may enhance their capacity and effectiveness. For example, family child care network staff who have regular opportunities to reflect with a supervisor about their work with providers may feel more confident and effective in their roles. Peer support, including opportunities to share strategies and problem solve with other staff, is also important for network staff because working with family child care providers can sometimes be isolating and challenging.
Section 5: The Pyramid Model for Promoting Social Emotional Competence in Infants and Young Children: Implementing Evidence-Based Promotion, Prevention, and Intervention Practices in Early Care and Education Programs

Overview

The Pyramid Model for Promoting Social and Emotional Competence in Infants and Young Children (Fox et al., 2003; Hemmeter et al., 2021: Hemmeter, Ostrosky, & Fox, 2021) was developed to provide early educators with guidance on the promotion, prevention, and intervention practices that are needed to support young children’s social-emotional development and intervene effectively with challenging behavior. In programs implementing the Pyramid Model, practitioners are offered ways to establish nurturing and responsive relationships with children and families; provide predictable and supportive environments; promote the development of social, emotional, and behavioral skills; and address challenging behavior through understanding the behavior and designing interventions that are positive and focused on teaching new skills. The implementation of the Pyramid Model is guided by a program-level leadership team that (a) establishes and maintains staff buy-in, (b) fosters family engagement, (c) establishes program-wide expectations related to social-emotional skills and behavior, (d) provides ongoing professional development and coaching for classroom fidelity of implementation of Pyramid Model practices, (e) establishes procedures for addressing challenging behavior using a team-based process, and (f) uses data for decision-making.

The Pyramid Model can be implemented within family child care homes, child care centers, Head Start, public preschool programs, early intervention, and early childhood special education programs. In some programs, the implementation of the Pyramid Model has been referred to as using PBIS. The Pyramid Model is recognized as offering PBIS practices that are developmentally appropriate and culturally responsive.

The National Center for Pyramid Model Innovations (NCPMI), funded by the Office of Special Education Programs, offers free resources to help practitioners, programs, trainers, coaches, and states implement the Pyramid Model. Those resources also include resources developed by previous Pyramid Model Technical Assistance Centers (e.g., Center on Social Emotional Foundations for Early Learning). These resources include:

- A statewide implementation guide with materials for each stage of implementation
- Training modules for practitioners and families
- Materials and guidance for providing practice-based coaching on Pyramid Model practices to program staff
Implementation fidelity tools and data decision-making guides

A behavior incident tracking system that provides data for addressing behavior incidents in a program and identifies potential equity issues in the use of exclusionary discipline

Materials and resources for practitioners to use in their work with children and families

Robust resources on trauma, equity, addressing suspension and expulsion, family engagement, supporting children and families during the pandemic, and inclusion

Implementation Strategies

Thirty-two states and territories have initiated state efforts for implementing the Pyramid Model within early childhood programs (see Appendix D for listing of states). These efforts have included statewide professional development, integration of the implementation of the Pyramid Model within QRIS, systematic state implementation and scale-up, and the training of trainers and coaches. The implementation strategies used in establishing the Pyramid Model within programs has been deeply informed by implementation science and the lessons learned from over 15 years of implementation success.

The developers of the Pyramid Model recommend that statewide implementation teams establish critical structures to implement, scale, and sustain the Pyramid Model within local programs. Each of these key structures uses data tools to examine the fidelity of the implementation of the model, to measure outcomes, and to guide their implementation process. These key structures are:

- **State leadership team.** It is important to convene a cross-sector and collaborative team of state leaders that will guide statewide implementation and scale-up.

- **A professional development network of program (i.e., implementation) coaches.** The network of program coaches provides training, technical assistance, and coaching to the leadership teams of local programs engaged in implementing the Pyramid Model.

- **Implementation sites and high-fidelity demonstration sites.** Local programs identify a leadership team to guide implementation of the Pyramid Model within their program. Implementation sites that are implementing the Pyramid Model with fidelity are selected to serve as demonstration sites where others can learn more about the approach and outcomes.

The implementation of the Pyramid Model involves a robust menu of professional development for practitioners and program leaders. Programs implementing the approach identify a leadership team to guide implementation within their site. Leadership teams receive training and guidance for working together, using data for decision-making, and supporting practitioners as they implement Pyramid Model practices. Practitioners receive training in the implementation of the Pyramid Model practices with infants, toddlers, and preschoolers. Practitioner coaches are trained in the use of practice-based coaching to support practitioners in reaching fidelity of practice implementation and receive training in observation tools that are used to assess practice implementation fidelity and identify coaching needs (i.e., Teaching Pyramid Observation Tool (TPOT), Teaching Pyramid Infant-Toddler Observation Scale (TPITOS). In addition, key personnel within programs are trained in a process to use to
develop and implement interventions for children with persistent challenging behavior (*Prevent-Teach-Reinforce for Young Children*).

The implementation of the Pyramid Model across all classrooms in a program occurs over time and follows an integrated stage-based framework of implementation. It is a systems change initiative that includes changes in policies and procedures, family engagement and support, ongoing professional development, approaches to behavior intervention, and practices within the classroom. As a result, it might take several years to fully implement the model in all of the program’s classrooms.

### Implementation Examples

#### Statewide Implementation in Wisconsin

*Wisconsin* has been building the capacity of early childhood programs and practitioners to implement the Pyramid Model since 2009. A cross-sector state leadership team works to build and guide this effort to provide Pyramid Model training and support to practitioners and leaders in child care, public preschool, early childhood special education, family resource centers, and Head Start programs.

In 2016, an evaluation of the Pyramid Model work in two Wisconsin communities found that children in Pyramid Model programs had better social and emotional skills and less problematic behavior than children in non-Pyramid Model programs. The positive outcomes achieved through the implementation of the Pyramid Model resulted in a substantial funding allocation for the work from the State Department of Children and Families.

The Wisconsin Alliance for Infant Mental Health coordinates the Wisconsin Pyramid Model Initiative ([https://wiaimh.org/pyramid-model-home](https://wiaimh.org/pyramid-model-home)). The services include state and regional coordination of training for early childhood practitioners and infant and early childhood mental health consultants in Pyramid Practices, guiding regional Pyramid Model communities of practice, providing training and coaching support for program-wide implementation within communities, and promoting intentional integration of infant mental health consultation and Pyramid Model coaching. By 2019, the Wisconsin Pyramid Model effort provided training and implementation support to 112 implementation sites, 120 trainers, 305 classroom coaches, and 10 implementation coaches to support programs in their program-wide implementation.

#### Early Care and Education Program Implementation in Florida Community

The Children’s Academy Fishhawk (CAFH, [https://childrensacademyfishhawk.com/](https://childrensacademyfishhawk.com/)) in Florida is a community child care program that enrolls about 125 children from birth to 5 years old. After successfully implementing the Pyramid Model in their first location, Children’s Academy Fishhawk sought to start their new location using the Pyramid Model framework to support children’s social-emotional learning. In 2018, they received training to become a program-wide implementation site.
The program identified a leadership team to plan for implementation and has met monthly in an ongoing process to ensure that all classes were receiving training and coaching on the use of Pyramid Model practices. The leadership team includes the director, assistant director, and two teachers, one representative of the infant/toddler classrooms and one representative of preschool classrooms. The assistant director received additional training and support to build the needed skills to serve as a practitioner coach. The practitioner coach supports teachers in their use of Pyramid Model practices in their classrooms. The practitioner coach and the leadership team use TPOT and TPITOS to assess teacher strengths and needs and to see growth in their practices over time.

CAFH has also successfully teamed with teachers and families to support children needing more intensive supports in the classrooms. Teachers involved in teaming to develop behavior plans have reported great success with decreasing individual children's challenging behavior.
Section 6: Infant and Early Childhood Mental Health Consultation (IECMCH): A Prevention-Based Approach to Supporting Social and Emotional Wellness in Early Care and Education Settings

Overview

In IECMHC, consultants with expertise in early childhood development and mental health form collaborative partnerships with adults who care for young children. Within that collaboration, professionals build their capacity to support children’s healthy social-emotional development and to respond appropriately to mental health needs (Cohen & Kaufmann, 2000; rev. 2005; SAMHSA, 2014). There are IECMHC programs across the country at the state, tribal, and local levels.

IECMHC is a broad intervention that is implemented in systems serving young children, including early childhood education, home visiting, child welfare, early intervention, and primary care. By definition, IECMHC is an indirect service (typically working with the provider, not with the child directly), is multilevel, and is focused on equity. IECMH consultants work at multiple levels to address systemic issues and build workforce capacity to create nurturing settings and healthy relationships for all children. During the consultation process, early care and education professionals reflect upon their relationships and interactions with families and children to build self-awareness, perspective-taking, and empathy, while also learning skills related to collaboration with families and behavior management. All consultation depends upon a trusting relationship with a consultant in which difficult topics, including racial disparities and bias, can be productively discussed.

Evidence for IECMHC consistently indicates that it has significant positive effects on early childhood professionals (e.g., improved self-efficacy, reduced stress) and on young children (e.g., increased protective factors, reduced challenging behaviors (Brennan et al., 2008; Conners-Burrow et al., 2012; Heller et al., 2011; Perry et al., 2010; Shivers, 2015).

Implementation Strategies

There are five stages to implementation of infant and early childhood mental health consultation. The phases of consultation may repeat or continue in an on-going capacity. It is critical to understand the role of the consultant and the consultee in each of these stages.
Social and Emotional Wellness

Initiation

In this stage, there is an establishment of expectations and an alignment of philosophy. Expectations include how often and how long the consultant will be available, expectations for the consultee and how they will be available. It is a stage in which all parties come to understand what the expected outcomes are, how they will be measured, and overall philosophies of the consultant and the consultation program as well as that of the consultee be it an individual or a program.

Exploration

In this stage, the consultant explores concerns, establishes priorities, and identifies mutually agreed upon goals. This is achieved through the collaborative relationship that has been established and a thorough examination of the concerns raised. For example, if there are challenging behaviors identified, in the exploration stage these concerns are discussed in terms of how to interpret the behavior as well as how they are impacting their consultee. Next, specific measurable priorities and goals are identified so that a plan can be established.

Plan Development

The consultant and the administrators, staff, and/or family mutually agree upon a plan. Approaches may include implementing program-wide social-emotional supports, promoting positive relationships between members of teaching teams, adjusting the routine or the environment for a particular child, teaching new skills, and/or preventing challenging behavior.

Plan Implementation

The consultant supports the administration, family, and/or staff to implement new strategies and approaches. This may entail modeling, and it certainly includes reflective time between consultant and consultee, measuring the approach, sharing resources and ongoing observations. Other consultation activities are employed as needed.

Revisit Plans and Goals

The consultant and the family and/or staff plan a time to revisit the plan to determine if it is working. The goals and/or plan are updated. The consultant works with staff and families to maintain progress. This is an ongoing continuous quality improvement process and is dependent on the dosage that has been established (the length of time a consultant remains with a program).

Implementation Examples

Smart Support Arizona

The Smart Support program is operated by Southwest Human Development (SWHD, https://www.swhd.org/), Arizona’s largest not-for-profit agency dedicated to early childhood
development. SWHD serves as both the administrative home for Smart Support and its largest consultation services provider. The program is funded by First Things First, an Arizona citizens’ initiative passed in 2006 to fund quality early childhood development and health programming through a tax on tobacco. Smart Support services are provided without cost to Arizona Department of Health Services licensed child care centers and Department of Economic Security regulated family care providers.

Smart Support provides services that match the individual needs of early care and education programs, including one or a mix of child-focused consultation, classroom-focused consultation, and program-focused consultation. Mental health consultants work with teachers and family child care educators to increase their skills and capacities, rather than working directly with a child.

**Early Childhood Consultation Partnership—Connecticut**

Connecticut’s *Early Childhood Consultation Partnership®* (ECCP, [http://www.eccpct.com/](http://www.eccpct.com/)) is a nationally recognized, evidence-based infant early childhood mental health consultation program designed to meet the SE needs of infants, toddlers, and preschoolers. Mental health consultation is an intervention that builds the capacity of families, providers, and systems to prevent and treat social and emotional issues in young children. ECCP’s statewide capacity and high quality practices position ECCP to be a solid response to the system level changes necessary to children’s success.

- ECCP is an Evidenced-Based, Best Practice program that is solidly backed by three rigorous Random Control Trial evaluations (Preschool (1) 2007& (2) 2010 & a Pilot Infant Toddler 2010) conducted by W. Gilliam, Ph.D., Yale University.
- ECCP is a national model identified as one of six top effective early childhood mental health consultation programs in the country. “A Study of Effective Early Childhood Mental Health Consultation Programs.” Georgetown University. 2009.
- ECCP has been highlighted as a promising practice by Zero To Three, Center For Law and Social Policy, National Center for Children in Poverty, Georgetown University Center for Child and Human Development, Office of Head Start, National Association for Directors of Special Education and internationally by Preschool Education (Beijing).
- ECCP actively partners with statewide collaborations such as CT Infant Mental Health Association, Birth to Three, CT Department of Children and Families, CT Department of Education, (Early) Head Start, and School Readiness.
- ECCP is a very cost-effective service that makes maximal use of funds in the service of children, families, and early childhood professionals.
- Ninety-nine percent of children at risk of suspension or expulsion were not suspended or expelled at the one-month follow up of their classroom teacher receiving ECCP consultation services.

See **Appendix E** for Landscape of IECMHC Implementation.
Section 7: Relationship-Based Care for Infants and Toddlers: A Training for Trainers Professional Development Strategy

Overview

The free *Relationship-Based Care for Infants and Toddlers: A Training for Trainers* series is offered by the Child Care State Capacity Building Center’s Infant/Toddler Specialist Network via a request from the state, territory, or tribal Child Care and Development Fund Administrator. The series provides rationale and guidance for implementing relationship-based care in family child care homes and early care and education centers that serve infants, toddlers, and their families.

The content is based on the understanding that relationships are essential for healthy development. Responsive, nurturing relationships with caring adults provide safety and support for infants and toddlers to develop a sense of security and discover the world around them. Group care for infants and toddlers should be organized to promote the development and strengthening of relationships between caregivers, infants, toddlers, and families.

The training for trainers (TFT) relies on the essential program practices for relationship-based care described by the Program for Infant/Toddler Care (PITC) (Lally & Mangione, n.d.). PITC offers these six essential program practices as a framework for relationship-based care:

1. Primary caregiving is the practice in which the care of each infant or toddler is assigned to one specific caregiver who is principally responsible for caring for that child in the care setting and communicating with the child’s family.

2. Continuity of care is the practice in which primary caregivers and children stay together for as long as possible—preferably for the children’s first 3 years—creating opportunities for caregiver-child, caregiver-family, and child-child relationships to develop and deepen over time.

3. Small group care is the practice in which primary caregivers provide care for infants and toddlers in discrete groups, creating an intimate setting for interactions, care routines, and exploration.

4. Individualized care is the practice of being responsive and adapting to each infant’s and toddler’s interests, needs, and abilities to support their healthy development.

5. Culturally responsive care is the practice of caring for children from culturally diverse families in ways that are consistent with their home practices and values.

6. Inclusive care is the practice of actively including infants and toddlers with disabilities or delays in group care settings, with appropriate accommodation and support.
PITC’s program practices create an opportunity for responsive interactions that can lead to deep, nurturing relationships between the caregivers and the infants and toddlers over time.

In addition to the six program practices, this series includes an introductory session, a philosophical foundation for relationship-based care, and an overview of adult learning and planning for next steps. The sessions are designed to be facilitated by training and technical assistance professionals, including trainers, consultants, specialists, coaches, college faculty, program monitors, and mentors. State, territory, and tribal leads may also participate in this training, as appropriate. Each session includes a slide deck, resources, learning activities, video links, and a detailed facilitator’s guide. Facilitators can tailor the sessions to the needs, interests, and availability of the participants.

**Implementation Strategies**

**Training Format**

This TFT is typically offered as a 2-day, in-person event. It can also be offered as an online virtual training or a hybrid training—a combination of in-person and virtual learning. Contact your regional Infant/Toddler Specialist at the Child Care State Capacity Building Center to individualize the training format to the needs and interests of your state, territory, or tribe. Contact information for Infant/Toddler Specialists can be found in the [Infant/Toddler Resource Guide](#).

**Recommended Preparation**

The series is designed for training and technical assistance professionals who have a background in infant and toddler learning, development, and care. There is a substantial amount of content and guidance in the materials; however, the facilitator should be knowledgeable and capable of responding to questions and concerns not covered in the materials.

**Requirements for Participants and Implementation Support**

Participants in the TFT commit to facilitating the training in their own communities within a certain time frame. They receive ongoing implementation support from the Infant/Toddler Specialist. The specific time frame is defined by the participants; the Infant/Toddler Specialist; and the state, territory, tribe, or host agency. Most frequently, the time frame is 6 months. Participants have the flexibility to individualize aspects of the training to meet the interests and needs of the infant and toddler caregivers they support. When participants develop their own training, they will work with the Infant/Toddler Specialist to maintain fidelity. Participants will receive continued individualized support from the Infant/Toddler Specialist as they move toward broader implementation.
Implementation support can be tailored to include the following:

- A community of practice
- Coaching
- Consultation
- Office hours with the Infant/Toddler Specialist

**Implementation Example**

**Michigan** has adopted relationship-based care as part of the infrastructure of its infant and toddler child care learning communities. After participating in *Relationship-Based Care for Infants and Toddlers: A Training for Trainers*, the infant and toddler specialists in Michigan began using this training as a foundation for the professional development offered in their newly formed learning communities. The training components have been added as approved trainings to the Michigan registry. The state now includes this training within the scope of work for Michigan’s Infant/Toddler Specialist Network and learning communities as an ongoing requirement.

**Oregon** is currently working to align the *Relationship-Based Care for Infants and Toddlers: A Training for Trainers* curriculum with its professional development system’s Core Knowledge and Competencies. In addition, Oregon is adding the training into its registry system in anticipation of the TFT in which Oregon’s Infant/Toddler Specialists will participate at the beginning of 2021.
Section 8: Social and Emotional Strategies for School-Age Children

Overview

School-age children are defined as children 5–12 years of age who attend compulsory schooling (NCASE, 2019). School-age children represent roughly 45 percent of all children served through the Child Care and Development Fund (CCDF) (NCASE, 2020). School-age care takes place both before and after school, on weekends, on school holidays, and during the summer. In an effort to provide effective care to school-age children, it is important to understand how they develop relationships, manage their emotions, cope with stress, and develop social skills, as young children and through adolescence.

Access to developmentally appropriate frameworks and strategies can help school-age care programs and family child care educators meet the social and emotional health needs of school-age children. The following information is based on the understanding that relationships are essential for healthy development. Responsive, nurturing relationships with caring adults and peers provide safety and support for school-age children to develop a sense of security and discovery, and to excel socially, emotionally, and academically.

The Pyramid Model and Positive Behavioral Interventions and Supports (PBIS)

Both the Pyramid Model and Positive Behavioral Interventions and Supports (PBIS) emphasize evidence-based practices, behavior analysis, prevention and behavioral sciences, learner outcomes, embedded training and coaching, capacity building, explicit teaching and instruction, and continuous progress monitoring and evaluation (Farrell, A; Collier-Meek, M; & Pons, S., 2013). They differ primarily with regard to the chronological age and developmental stages in focus—that is, infants, toddlers, and preschoolers as compared to school-age children and youth.

PBIS is a proactive approach that schools and out-of-school programs can use to improve environmental safety and promote positive behavior by teaching children positive behavior strategies. Some relevant PBIS guiding principles are as follows:

- Children can learn behavioral expectations for different situations.
- Children learn expected behaviors for each setting through explicit instruction and opportunities to practice and receive feedback.
- Each child is different, so programs need to give many kinds of behavioral support.
How programs teach behavior should be based on research and science.

Tracking a child’s behavioral progress is important.

Programs gather and use data to make decisions about behavior interventions.

Program staff members are consistent on how they encourage expected behavior. (Farrell, A; Collier-Meek, M; & Pons, S., 2013).

Collaborative for Academic, Social and Emotional Learning (CASEL) Framework

Social and emotional learning (SEL) is the process through which all young people acquire and apply the knowledge, skills, and attitudes to develop healthy identities, manage emotions and achieve personal and collective goals, feel and show empathy for others, establish and maintain supportive relationships, and make responsible and caring decisions (CASEL, 2020). According to CASEL, the goal of programs should be to foster the development of five interrelated sets of cognitive, affective, and behavioral competencies: self-awareness, self-management, social awareness, relationship skills, and responsible decision-making (CASEL, 2020). These core competencies provide children with a foundation for social relationships and academic achievement.

- **Self-Awareness** is the ability of the child to recognize and name her or his emotions. It also includes the ability to understand her or his own needs, as well as her or his strengths and limitations. This awareness of self is crucial to early school success. (CASEL, 2020).

- **Self-Management** is the ability to regulate emotions and behaviors so that goals are achieved. In addition, it involves persevering with difficult tasks and in complex social interactions. It requires children to remember and generalize what they have been taught, initiate changes in their behavior, and constantly monitor their behavior in varying situations. These foundational self-management skills emerge during the preschool years as the brain develops and continue to evolve throughout early childhood and adolescence. (CASEL, 2020).

- **Social Awareness** is the ability to understand what others are feeling and have the understanding to take their perspective. Theory of mind is the ability to understand how different beliefs, motivations, moods, and levels of knowledge affect our own behavior as well as the behavior of those around us. It is a necessary component of perspective-taking, which is the child’s ability to relate to others, empathize with them, and see things from their viewpoint. (CASEL, 2020).

- **Relationship Skills** refer to the child’s ability to form positive social relationships, work together, and deal effectively with conflict. Research suggests that when children are intentionally taught social skills, given practical opportunities, and receive guidance during teachable moments, they develop positive relationships and friendships. (CASEL, 2020).

- **Responsible Decision-making** is when children learn to make positive choices about their personal and social behavior, and thereby make responsible decisions. Focus in the classroom and school community needs to be placed on problem-solving, reflection, perceptive thinking, self-direction, and motivation skills that will contribute to lifelong success (CASEL, 2020).
Section 9: Integrating Social—Emotional Supports as Part of the Child Care and Development Fund Quality Activities

Child Care and Development Fund and Quality Set-Aside Basics

A core element of the Child Care and Development Fund (CCDF) is improving the quality of child care services and ensuring that parents have access to high-quality child care options.

The law says that states, territories, and tribes must develop strategies for increasing the supply and quality of services for children in underserved areas, infants and toddlers, children with disabilities, and children in nontraditional-hour care.

Lead Agencies are required to provide quality improvement activities directly or through contracts with local child care resource and referral agencies or other appropriate organizations. Activities should be aligned with a statewide needs assessment of what is required to carry out such services.

The law designated set-asides, or percentages of funding that must be set aside for use on specific topics such as quality improvement and infant and toddler care. The increase in the minimum quality set-aside began in fiscal year (FY) 2016. For states and territories, the infant and toddler quality set-aside began in FY 2017; for tribes, the set-aside began in FY 2019.

**CCDF and Quality Activities**

“The CCDBG Act and CCDF final rule require states to fund at least one of the following 10 quality activities that will improve the quality of child care services provided in the state” (Office of Child Care, n.d., para. 1). The following approved quality improvement activities provide opportunities for new or expanded investments in social-emotional supports (see figure 1).

**Figure 1. Options for Quality Activities**

1. Supporting the training and professional development of the child care workforce
2. Improving development or implementation of early learning and development guidelines by providing technical assistance to eligible child care providers
3. Developing, implementing, or enhancing a tiered quality rating and improvement system (or other system of quality improvement, even if not called a QRIS, as long as the other quality

---

1 Child Care and Development Fund, 45 C.F.R. § 98.50(b) (2016).
improvement system contains the elements of a QRIS). A QRIS is a systematic framework for evaluating, improving, and communicating the level of quality in early childhood programs and contains five key elements:

a. Program standards  
b. Supports to programs to improve quality  
c. Financial incentives and supports  
d. Quality assurance and monitoring  
e. Outreach and consumer education

4. Improving the supply and quality of child care programs and services for infants and toddlers

5. Establishing or expanding a statewide system of child care resource and referral services

6. Facilitating compliance with state requirements for inspection, monitoring, training, and health and safety standards

7. Evaluating and assessing the quality and effectiveness of child care programs and services offered in the state

8. Supporting accreditation

9. Supporting state or local efforts to develop or adopt high-quality program standards relating to health, mental health, nutrition, physical activity, and physical development

10. Carrying out other activities determined by the state to improve the quality of child care services for infants and toddlers, preschool-aged, and school-aged children, which may include consumer and provider education activities, for which measurement of outcomes is possible relating to improved provider preparedness, child safety, child well-being, or entry to kindergarten.

Other Approved Quality Improvement Activities

Other quality improvement activities can be implemented that improve the quality of child care services provided, so long as outcomes related to the improvement of provider preparedness, child safety, child well-being, or entry to kindergarten can be measured (Office of Child Care, n.d., para 2).

Appendix B. Examples of Social and Emotional Development in State QRIS Standards

The following table provides examples of how some states address SE development in their quality standards. While many states do not address SE development explicitly in their quality standards, they often take a more comprehensive approach such as requiring that participating programs align their curriculum with the state’s early learning guidelines or conduct ongoing developmental screenings or assessments to inform instruction. The information in the following table was pulled from the QRIS Compendium and state websites in 2016.

| Colorado       | **Learning Environment:**                                                     |
|                | **Transitions**                                                               |
|                | 2.4 The program has written policies and procedures that describe how transitions are supported among all early childhood and home settings and how transition information is shared with families. |
|                | 2.5 The program offers information sessions and/or individual family meetings specific to child transitions (e.g., what to expect in terms of transitions from one classroom to another, from home to a classroom, to another setting, connecting families with schools for children transitioning into school) in order to help prepare the child and family for transition and to help the child adjust to new settings. |

|                | **Curriculum**                                                                |
|                | 4.1 The program uses a curriculum that has been aligned with the domains of Colorado’s Early Learning and Development Guidelines and is age specific to the children the program serves to include: |
|                | All Ages: 1) physical development and health; 2) social and emotional development; 3) language and literacy development; 4) cognitive development; 5) approaches to learning |
|                | Preschool Ages (3–5): 6) literacy knowledge and skills; 7) logic and reasoning; 8) mathematics knowledge and skills; 9) science knowledge and skills; 10) social studies knowledge and skills; 11) creative arts expression |
### Continuity of Care
4.4 Primary caregiving practices are part of program policies and procedures.
4.5 Continuity of care practices are part of program policies and procedures.

### Child Assessment
4.10 Developmentally appropriate child assessments (e.g., observation data, portfolios, work samples) are conducted within 90 calendar days after enrollment, and at least one other time within a year. Results of assessments are shared during parent/teacher conferences in a culturally and linguistically appropriate manner.
4.11 The program has a child assessment system that has been aligned with Colorado’s Early Learning and Development Guidelines.
4.12 The program provides documentation that 75% of educational staff participate in annual training or maintain reliability on use of the selected child assessment tool(s).
4.13 Assessment results are used to individualize curriculum and lesson planning.

### Intentional Teaching Practices
1.1 The program utilizes an age-appropriate curriculum that supports development across five learning domains (cognitive, social, emotional, physical, and approaches to play), and classrooms, materials, curriculum, and interactions reflect value for children's home languages, traditions and culture.

1.2 Curriculum is aligned with the Georgia Early Learning and Development Standards.

### Written Health Information and Resources
3.3 Everything at 2-point level and Screening tools (Ages and Stages Questionnaire and Ages and Stages Questionnaire Social-Emotional) are used annually with family permission to provide early detection of health-related issues and developmental delays to support early intervention.

### Licensed 2 Child Care Centers
Provide an environment that is welcoming, nurturing, and safe for the physical, emotional, and social well-being of all children.

### Licensed 3 Child Care Centers—Level 3
8. A written curriculum reflects the program philosophy and goals and is based on child development and appropriate practice and provides for the various ages, ability levels, and developmental stages of the children. This curriculum meets the following requirements:
   1. Provides for children’s physical, cognitive, language, literacy, and social emotional development. It includes goals for children that are consistent with the Indiana Foundations for Young Children.
   2. Families are made aware of the curriculum of the program through one or more of the following ways: parent handbooks, newsletters, orientation, and/or family meetings.
### Licensed Child Care Home—Level 2

10a. The home is welcoming, nurturing, and safe for children to have interactions and experiences that promote their physical, social, and emotional wellbeing. Indicators must include:

1. Each child and his/her family are warmly acknowledged upon arrival and departure.
2. Each child feels safe, accepted, and protected. This is supported by daily practices that reinforce respect for people, feelings, ideas, and materials.
3. The environment includes representation of each child and family (including all age groups, abilities, and cultures), which might include books, pictures, photographs, music/songs, games, toys, dress-up clothes/materials, and foods.
4. A place for storage of each child’s personal belongings and possessions is labeled with the child’s name.
5. Caregivers communicate with and listen to children (both verbal and nonverbal messages) with lots of one-on-one attention throughout the day and usually at eye-level, including time when the caregiver is down on the floor with the children.
6. Children’s ideas, requests, and questions are acknowledged with a verbal response or physical gesture.
7. Children’s feelings are acknowledged with an accepting, non-critical verbal response, or physical gesture.
8. Caregivers refrain from negative verbal or physical responses to children at all times, which includes yelling, criticizing, scolding, threatening, using sarcasm, name calling, yanking, pinching, squeezing, or spanking.
9. Destructive or disruptive behavior is addressed with children (face to face rather than from a distance) by the caregiver, explaining the effect of the behavior, stating the desired behavior, and redirecting or helping the child make alternate choices.
10. Conflicts are resolved by/with children through a problem-solving approaches (acknowledge feelings, listen to children share what happened, ask for ideas or solutions, and follow through).
11. The caregiver sometimes joins in children’s play, expanding upon their ideas and playing interactively.
12. The home is generally characterized by varying sounds and/or comfortable conversation from engaged children and involved adults.

10b. Specific Infant/Toddler indicators must include:

1. Infants are frequently held and comforted when crying.
2. Infants are given one-to-one attention during feeding and diapering.
3. Caregivers engage in many one-to-one face-to-face interactions with infants/toddlers, including singing and playful interactions.
4. Caregivers acknowledge infant/toddler babblings with a verbal response, vocal imitation or physical gesture.
5. Caregivers engage in conversation with toddlers.
6. Caregivers give toddlers simple words to use to express feelings. Verbal toddlers are then encouraged to use words in conflict situations.
Social and Emotional Wellness

Centers:
Learning Environment/Developmentally Appropriate Practice

Step 2
3. The curriculum guides the development of a daily schedule that is predictable yet flexible and responsive to the individual needs of children. The schedule provides time and support for transitions, includes both indoor and outdoor experiences, and is responsive to the child’s need to rest or be active (National Association for the Education of Young Children ((NAEYC)) criteria 2.A.07).

4. The program has a written method for curriculum planning that includes planning from children’s interests and skills.

5. Each program site has one teacher or staff member responsible for educational programming who has completed the training in Maine’s Early Childhood Learning Guidelines.

Authentic Assessment
Step 2
15. Evidence is collected two times per year on children’s development in the following areas:
   • Social/Emotional
   • Cognitive
   • Physical (gross and fine motor) development
   • Communication

Examples of evidence include children’s work, observations, interviews with families, audio tape, video tape, and photographs. This evidence is incorporated in curriculum planning.

For programs serving infants and toddlers, the observations are linked to Supporting Maine’s Infants and Toddlers—Guidelines for Learning and Development (ITLG), and for programs serving children 3–5 years, the observations are linked to Maine’s Early Childhood Learning Guidelines (ECLG), which are used as a guide for planning.

Step 3
13. Evidence is collected three times per year on children’s development in the following areas:
   • Social/Emotional
   • Cognitive
   • Physical (gross and fine motor) development
   • Communication

Examples of evidence include children’s work, observations, interviews with families, audio tape, video tape, and photographs. This evidence is incorporated in curriculum planning. For programs serving infants and toddlers, the observations are linked to Supporting Maine’s Infants and Toddlers—Guidelines for Learning and Development, and for programs serving children 3–5 years, the observations are linked to Maine’s Early Childhood Learning Guidelines, which are used as a guide for planning.

Step 4
10. Evidence is collected four times per year on children’s development in the following areas:
   • Social/Emotional
   • Cognitive
   • Physical (gross and fine motor) development
   • Communication

Examples of evidence include children’s work, observations, interviews with families, audio tape, video tape, and photographs. This evidence is incorporated in curriculum planning. For programs serving infants and toddlers, the observations are linked to Supporting Maine’s Infants and Toddlers—Guidelines for Learning and Development, and for

<tr>
<td><strong>Beginning</strong></td>
</tr>
</tbody>
</table>

**Building Positive Relations**

Classroom and program staff promote a positive environment by greeting children and families on arrival, using proper names, and verbally interacting with each child. Interactions are supportive and adults engage children at eye level.

**Implementing Preventive Practices**

Resources have been provided for families of children who scored “Refer” in the ASQ-SE. The learning environment is arranged to eliminate wide spaces, allow children to interact in different areas, and reflect children’s interests. The classroom schedule includes a balance of large- and small-group activities, minimizes the number of transitions between activities, and is posted visibly. Transitions are addressed so that there is minimal waiting with nothing to do, and so children are notified individually and in a group about the upcoming transition. Classroom rules are brief, clear, and posted.

**Intermediate to Advanced**

**Implementing Targeted Social-Emotional Supports**
There is evidence of a follow-up on ASQSE referral conducted by the program with parental consent. The classroom staff demonstrate interactions with children to a) develop their self-esteem—active listening with children, no judgmental statements, responsive to children’s ideas, recognizing children’s efforts; b) encourage autonomy by providing children with opportunities to make choices, allowing children time to respond or complete tasks independently, creating opportunities for decision making, problem solving, and working together and teaching children strategies for self-regulating and/or self-monitoring behaviors; and c) promoting children’s individualized emotional regulation by helping them recognize emotional cues, identify appropriate choices, and solve problems.

High Quality

Addressing Concerning Behaviors

If applicable, and with written parental consent, the classroom staff actively participate in the child’s social-emotional support plans/strategies. In collaboration and consultation with the mental health agency/individual(s) supporting the child and family, strategies are integrated into the classroom. Mental health agency/individual(s) and educators embed the goals into the daily schedule and, as appropriate, incorporate typical peers in the activities.

New Mexico takes a comprehensive approach to addressing whole child development through observation, curriculum, assessment, screening, and professional development. Please refer to the FOCUS quality standards for more information.

**Note:** The table above outlines the social and emotional wellness activities for the states of Massachusetts (MA) and Minnesota (MN). The activities include professional development, coaching, community engagement, and leadership initiatives. The states are implementing these activities at various levels, with some fully implementing initiatives and others exploring or emerging. Financial support includes CCDF, IDEA, and other sources. The original CSEFEL/TA CSEI State Partners and initiative details are also provided.

### Appendix E. Landscape of IECMH Consultation Implementation

#### Infant and Early Childhood Mental Health Consultation Initiatives

<table>
<thead>
<tr>
<th>States</th>
<th>Description of Activities</th>
<th>For more information:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Alabama</strong></td>
<td>The First 5 Consultation Project is a combined effort between multiple state agencies that serve children and families. It is unique in that it pairs an infant and early childhood mental health (IECMH) consultant with providers who care for infants, young children, and families to collaboratively provide a problem-solving and capacity-building intervention. Currently, IECMHC is available to licensed child care facilities, First Class Pre-K, and Early Intervention pilot sites.</td>
<td><a href="https://children.alabama.gov/infant-early-childhood-mental-health/">https://children.alabama.gov/infant-early-childhood-mental-health/</a></td>
</tr>
<tr>
<td><strong>Arkansas</strong></td>
<td>Project PLAY matches early childhood mental consultants with early care and education providers in Arkansas. This service offers innovative techniques proven to positively impact the social and emotional development of children.</td>
<td><a href="https://familymedicine.uams.edu/research-and-scholarly-activity/red/ecpd/projectplay/">https://familymedicine.uams.edu/research-and-scholarly-activity/red/ecpd/projectplay/</a></td>
</tr>
<tr>
<td><strong>Arizona</strong></td>
<td>Smart Support consultants work with programs to design an individualized plan to meet the program’s needs for children ages birth to 5. Services may include early childhood mental health consultation and professional development, implementation of classroom strategies, and resources or referrals for specific children or situations. The plan may be short- or long-term, depending on need.</td>
<td><a href="https://www.swhd.org/training/smart-support/">https://www.swhd.org/training/smart-support/</a></td>
</tr>
<tr>
<td>States</td>
<td>Description of Activities</td>
<td>For more information:</td>
</tr>
<tr>
<td>----------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Connecticut</td>
<td>The Early Childhood Consultation Partnership (ECCP®) is a statewide, evidence-based, mental health consultation program designed to meet the social and emotional needs of children birth to 5 in early care or education settings. The program builds the capacity of caregivers at an individual, family, classroom, or center-wide level. It provides support, education, and consultation to caregivers in order to promote enduring and optimal outcomes for young children. The Department of Children and Families implemented this initiative through a contract with Advance Behavioral Health (ABH.) ABH is responsible for the development and administration of the program throughout the state.</td>
<td><a href="http://www.abhct.com/Programs_Services/ECCP/">http://www.abhct.com/Programs_Services/ECCP/</a></td>
</tr>
<tr>
<td>Delaware</td>
<td>Early Childhood Mental Health Consultants address school readiness for young children. The Division of Prevention and Behavioral Health Service in the Department of Services for Children, Youth and their Families offers Early Childhood Mental Health Consultations as a free service and partnership with Delaware early childhood education programs with a focus on children 2–5 years of age. All consultants are licensed mental health professionals with experience working in early childhood settings.</td>
<td><a href="https://kids.delaware.gov/pbhs/services-offered.shtml">https://kids.delaware.gov/pbhs/services-offered.shtml</a> and <a href="https://kids.delaware.gov/pbhs/pdfs/pbh-brochure-ecmhc.pdf">https://kids.delaware.gov/pbhs/pdfs/pbh-brochure-ecmhc.pdf</a></td>
</tr>
<tr>
<td>District of Columbia</td>
<td>Children and Youth Behavioral Health Services, Department of Behavioral Health supports the Early Childhood Mental Health Consultation Project, known as the Healthy Futures Program, which operates in 24 child development centers located throughout the District. Consultation focuses on improving the overall quality of the program and assisting staff to solve a specific issue that affects more than one child, staff member, or family.</td>
<td><a href="https://dbh.dc.gov/service/children-youth-and-family-services">https://dbh.dc.gov/service/children-youth-and-family-services</a></td>
</tr>
</tbody>
</table>
## States

<table>
<thead>
<tr>
<th>States</th>
<th>Description of Activities</th>
<th>For more information:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illinois</td>
<td>Illinois Action for Children’s Early Childhood Mental Health Consultants (ECMHC) provide services for center- and home-based early care and education providers who care for children from birth through 5 years old at no cost to the providers. This service is provided through the Illinois Department of Human Services, in collaboration with Caregiver Connections and the statewide consultation program, which is available throughout Chicago and Cook County.</td>
<td><a href="https://www.actforchildren.org/providers/early-care-learning-program-supports/consultation-services/early-childhood-mental-health-consultants/">https://www.actforchildren.org/providers/early-care-learning-program-supports/consultation-services/early-childhood-mental-health-consultants/</a></td>
</tr>
<tr>
<td>Iowa</td>
<td>The Iowa Department of Public Health is currently implementing a 5-year federal grant called Project LAUNCH. The purpose of this initiative is to support young children’s healthy mental development by focusing on strategies that foster safe, stable, and nurturing relationships and positive experiences for children, newborn through age 8. Through Project LAUNCH, Iowa is developing infrastructure to support Infant and Early Childhood Mental Health Consultation, a service that pairs mental health clinicians with direct service professionals such as childcare providers, family support workers, and early interventionists. Mental Health Consultation is designed to support direct service staff and build their capacity to promote young children’s healthy mental development.</td>
<td><a href="https://iowaprojectlaunch.org/about-us">https://iowaprojectlaunch.org/about-us</a></td>
</tr>
<tr>
<td>Kentucky</td>
<td>Kentucky’s Early Childhood Mental Health Program (ECMHP) was created in state fiscal year 2003 as a component of a large, statewide early childhood development initiative, KIDS NOW, the majority of which is now administered by the Governor’s Office of Early Childhood. ECMHP is co-administered by the Children’s Behavioral Health and Recovery Services Branch within the Department for Behavioral Health, Developmental and Intellectual Disabilities (DBHDID) and the Early Childhood Promotion Branch within the Department for Public Health through a Memorandum of Agreement. In turn, DBHDID contracts with the 14 Regional Community Mental Health Centers (CMHCs) for program implementation. In addition, the program maintains contracts with the University of Kentucky for Early Childhood Mental Health (ECMH) training and consultation, and with Eastern Kentucky</td>
<td><a href="https://dbhdid.ky.gov/dbh/ecmh.asp">https://dbhdid.ky.gov/dbh/ecmh.asp</a></td>

</tr>
<tr>
<td>----------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Louisiana</td>
<td>University for staffing and resources related to the ECMHP. The ECMHP supports an Early Childhood Mental Health Specialist staff position in each of the 14 CMHCs. The Specialists' time is devoted solely to their regional ECMHPs and building regional capacity to better meet the social, emotional, and behavioral needs of children from birth through age 5 and their families.</td>
<td><a href="https://medicine.tulane.edu/departments/clinical-sciences/psychiatry/research/tikes">https://medicine.tulane.edu/departments/clinical-sciences/psychiatry/research/tikes</a></td>
</tr>
<tr>
<td>Louisiana</td>
<td>The Tulane Infant and Early Childhood Consultation and Support Services Program (TIKES,) is an intervention that teams a mental health professional with early childhood professionals to improve the social, emotional, and behavioral health of young children in early learning settings. TIKES, previously part of the Quality Start Program, was implemented in 2007 as a voluntary program for licensed childcare centers, designed to recognize, support, and increase the quality of child care throughout Louisiana. Participating centers receive mental health consultation services from a licensed mental health professional for 6 months. In the spring of 2020, remote TeleMHC was added to support individuals in Louisiana that are caring for young children, aged 0-6 years, during this COVID-19 pandemic.</td>
<td><a href="https://www.cccmaine.org/services-programs/early-childhood-consultation-outreach/">https://www.cccmaine.org/services-programs/early-childhood-consultation-outreach/</a></td>
</tr>
<tr>
<td>Maine</td>
<td>Early Childhood Consultation and Outreach (ECCO) is a program that provides services of an early childhood expert to educators, child care staff, and parents in order to develop effective strengths-based strategies and plans that support children's success across environments. ECCO consultants work with child care providers, Head Start centers, pre-schools, early elementary classrooms, and in homes with parents and foster parents. Services can be utilized for one child or for groups of children. ECCO responds to the unmet needs of at-risk children and changes outcomes for children in Washington County and beyond.</td>
<td><a href="https://www.cccmaine.org/services-programs/early-childhood-consultation-outreach/">https://www.cccmaine.org/services-programs/early-childhood-consultation-outreach/</a></td>

<td>--------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Maryland</td>
<td>The Infant and Early Childhood Mental Health (IECMH) Consultation Project improves the ability of staff, programs, and families to prevent, identify, treat, and reduce the impact of social, emotional and other mental health problems among children from birth through 5 years old. Based on the Project's success, the Maryland State Department of Education funded the expansion of the pilot program in 2006 to include 12 statewide child care licensing regions. In Maryland, the Project is both child/family and classroom/program focused. This hybrid model allows consultants to focus on specific child behaviors, while working with teachers to improve the overall quality of the classroom environment.</td>
<td><a href="https://earlychildhood.marylandpublicschools.org/infant-and-early-childhood-mental-health-iecmh-consultation-project">https://earlychildhood.marylandpublicschools.org/infant-and-early-childhood-mental-health-iecmh-consultation-project</a></td>
</tr>
<tr>
<td>Massachusetts</td>
<td>Early Childhood Mental Health Consultation (ECMHC) programs in the Department of Early Education and Care provide services to address and support the social-emotional development and behavioral health of children in early education and care programs. The ECMHC network provides consultation services that help support the social-emotional development and behavioral health of children in early education and care programs. ECMH consultants provide guidance to programs, educators, and families on addressing the developmental, emotional, and behavioral challenges of infants and young children in early education settings.</td>
<td><a href="https://www.mass.gov/service-details/early-childhood-mental-health-consultation-program">https://www.mass.gov/service-details/early-childhood-mental-health-consultation-program</a></td>
</tr>
<tr>
<td>Michigan</td>
<td>Michigan’s RTT-ELC Grant provided, in some communities, social and emotional family and consultants to child care providers, helping them to nurture family partnerships in the care of their child(ren) and engaging families in meaningful ways and supporting their development as leaders for their own children and communities. Strategies for this project increase family access to resources designed to promote the physical, social, and emotional health of their children. RTT integrates, in some communities, social and emotional (mental health), master’s degree prepared consultants into child care settings to provide programmatic coaching and support to increase the mental health climate and care for all children. In some cases, when a child</td>

<td>Ohio</td>
<td>The Ohio Department of Mental Health and Addiction Services, Early Childhood Mental Health Consultation (ECMHC) Program’s objectives are to build protective factors in young children, increase skills of parents, and promote the competencies of early childhood providers, especially for children ages birth to 6 years who are at risk for abuse, neglect, and poor social and emotional health. ECMHC targets the healthy social and emotional development of all young children in Ohio to ensure that they thrive and are ready for school. ECMH consultants team with early childhood providers to help them understand and problem-solve challenging child behaviors, both in and out of the classroom. Services include on-site child/family-focused technical assistance to parents, teachers, and staff; resources for parents, including art therapy, play therapy, or physical health referrals; and training and professional development. Consultants offer interventions for children and respond to the providers’ programming needs, which include providing family enrichment activities and modeling helpful interactions with children.</td>

### Resources

This briefing paper describes the core components and the evidence base for IECMHC. Policy recommendations are offered to guide efforts in states across the country.

Center for Early Childhood Mental Health Consultation. (n.d.) Best Practice Tutorial Series.  
[https://www.ecmhc.org/tutorials/index.html](https://www.ecmhc.org/tutorials/index.html).  
Series of tutorials designed to enhance skills and knowledge around how to implement effective mental health consultation in Head Start and Early Head Start (HS/EHS) programs.

Center for Early Childhood Mental Health Consultation (CECMHC), Georgetown University Center for Child and Human Development.  
[https://www.ecmhc.org/index.html](https://www.ecmhc.org/index.html).  
CECMHC is a group of university researchers that develop strategies to help Head Start programs build a strong mental health foundation for their children, families, and staff. The team's approach is grounded in a set of principles and a research-based model of delivering high quality mental health consultation services.

Pyramid Model Consortium ePyramid online learning modules. Online professional development program offers several courses in Pyramid Model practices including: (a) Infant/Toddler ePyramid Modules; (b) Preschool ePyramid Modules; (c) Birth to Five ePyramid Modules; (d) Trauma-informed care and the Pyramid Model; (e) Wellness: Taking care of yourself; and (f) Culturally responsive practices to reduce implicit bias, disproportionality, suspension, and expulsion. https://www.pyramidmodel.org/services/online-training/

Pyramid Model Consortium offers training and technical assistance in state capacity-building, program capacity-building, and training workshops. https://www.pyramidmodel.org/services/all-services/
Appendix G. IECMHC Resources

**ECMHC and the Early Childhood System**

This resource provides an overview of how IECMHC fits within a larger early childhood system. It offers information on the different components of an integrated IECMHC approach and identifies important strategic partners.

**Illinois’s Approach to Building and Sustaining IECMHC**

This brief focuses on how Illinois has utilized multiple funding sources and strategic partnerships across the state to build IECMHC into numerous early childhood systems. Lessons learned and action steps are provided.

**Financing IECMHC Efforts**

**Funding IECMHC: Lessons Learned from Arkansas’s Project PLAY**

This resource provides an overview of Project PLAY, the statewide IECMHC program in Arkansas. Financing lessons learned are presented including information on the use of a pilot project, building infrastructure, and partnerships.

**IECMHC Funding Tip Sheet: Engaging Foundations**

This tip sheet was designed to assist IECMHC programs plan for applying for financial support from foundations. Information is provided on the process of applying for a foundation grant, what foundations typically are interested in, and how a program can be prepared to respond quickly to these funding opportunities.

**Empirical Studies on IECMHC Programs**

**What Works (2009)**

This seminal report summarizes the results of a mixed methods study that focused on six effective IECMHC programs in early care and education settings. A conceptual framework was developed that continues to influence the design of IECMHC programs nationally.

**What’s Working (2018): IECMHC and Family Friend and Neighbor Care**

This report summarizes work done through a grant from the Robert Wood Johnson Foundation to the Georgetown University Center for Child and Human Development in 2018 to explore the role that IECMH consultants can play to support Family, Friend and Neighbor providers.

**IECMHC and the Pyramid Model**

**Understanding Infant and Early Childhood Mental Health Consultation and the Pyramid Model: How do these approaches fit together and how are they different?**

This resource was completed as part of the Center of Excellence for IECMHC, Phase 1. Many programs have both IECMH consultants and Pyramid coaches working together or in parallel. This brief provides information on how consultation and coaches fit together and highlights important differences.
All Hands on Deck: Partnering with Infant and Early Childhood Mental Health (IECMH) Consultants to Implement the Pyramid Model
This product was created by the National Center for Pyramid Model Innovations to explore the relationship between IECMH consultants and Pyramid Model coaches. The focus is on how consultants can support coaches in early childhood settings.

Designing an IECMHC Program

Developing and Implementing a Program-wide Vision for Effective Mental Health Consultation
This in-depth guide provides guidance and support for early childhood program administrators with respect to ensuring IECMHC in implemented in coordination with a wide vision for the center. It includes specific guidance on programmatic elements of IECMHC from hiring to supporting consultants.

Designing an IECMHC Program: Four Essential Building Blocks (Accompanying Worksheet)
Designing an IECMHC program is complicated and requires careful planning through a coordinated team of stakeholders. These two parallel resources simplify the design of IECMHC programs into four building blocks and provides guidance for how to explore each of these areas. A worksheet was created to help programs assess what has been completed and track progress.

Sample Needs Assessment
Conducting a needs assessment with stakeholders is a crucial first step in designing an IECMHC program. This resource provides a comprehensive overview and template of the necessary areas for data collection to complete a needs assessment specific to IECMHC program development.

The Georgetown Manual for School-Based Early Childhood Mental Health Consultation Services
This manual describes a framework to the provision of ECMHC in school settings. Georgetown University Center for Child and Human Development articulated this framework for ECMHC as implemented in a pilot program in a DC charter school for Pre-K 3- and 4-year-old classrooms. ECMHC services are organized into phases and described at multiple levels: child-/family-focused, classroom-focused, and programmatic consultation. The Appendix contains foundational materials describing the GU practice-based principles for ECMHC as well as tools to gather ECMHC data on children and classrooms. This document is intended as a resource that could aid other programs in the development of their manuals, though program manuals go beyond this content to also include site-specific implementation details.

A Day in the Life of an Early Childhood Mental Health Consultant
This resource contains a series of real-life vignettes that describe the different phases of the work that an MHC may encounter in the course of an average day. Reflective questions are included that make this a great resource for onboarding a new consultant.
Appendix H. General Social and Emotional Wellness Resources

Federal Technical Assistance Resources

Center for Early Childhood Mental Health Consultation. (n.d.) Taking Care of Ourselves: Stress and Relaxation. https://www.ecmhc.org/relaxation.html. This resource includes several tools for caregivers to help reduce stress.

Center for Early Childhood Mental Health Consultation. (n.d.) Recognizing and Addressing Trauma in Infants, Young Children, and Their Families. https://www.ecmhc.org/tutorials/trauma/mod1_0.html. This resource is a tutorial consisting of five modules related to trauma and infants, toddlers, and young children.

Social and Emotional Wellness

**Non-Federal Technical Assistance Resources**

Creating Trauma-Informed Systems, by the National Child Traumatic Stress Network. Web page that provides a definition of a trauma-informed child and family service system.

Appendix I. Federal Technical Assistance

The Office of Child Care supports states, territories and tribes in various ways. Among the most important is our training and technical assistance network. ACF’s Early Childhood Training and Technical Assistance system offers CCDF Administrators information, tools, training, and other supports. The system brings together resources from child care, Head Start, and our health partners, and focuses on ensuring that all early childhood systems and programs have access to the highest quality materials. Tools and resources can be found on the Child Care Technical Assistance website and the Head Start Early Childhood Learning & Knowledge Center.
